

Mt. Vernon Rain Garden

In 2010, as part of the Mt. Vernon Ohio Riverfront Development Project, a large rain garden was constructed. As the area is developed, this rain garden will be a focal point for the community. Southwestern Indiana Master Gardeners (SWIMGA) first began planting in this new rain garden in the fall of 2010. Work continues with the addition of more ornamental grasses and other plants that will be able to tolerate short periods of inundation while providing an educational example for all who visit the area.
